Special thanks to Shelley Hundling, a Raccoon Valley Electric Cooperative member-consumer, for supplying this month's cover image. Submit high-resolution photos for consideration to editor@ieclmagazine.com. You could receive \$100!

LINEWORKERS POWER OUR LIVES

BY SCOTT MEINECKE

You may not think about them until your power goes out, but electric lineworkers protect our homes and communities 24 hours a

day. Like other first responders who keep us safe, lineworkers endure all kinds of weather and challenging conditions.

In April, we officially celebrate Lineworker Appreciation Day to honor the men and women who power our lives. However, the work of lineworkers is celebrated and appreciated every day of the year. Here are some facts about the career of lineworkers.

Nearly two centuries of history

Lineworkers first appeared during the 1840s rush to spread telegraph service across the U.S., stringing wires between trees and other natural objects. It didn't take long for everyone to realize tall poles were safer and more practical.

Today, more than 122,000 U.S. lineworkers are responsible for maintaining and upgrading the nation's electric grid that connects more than 7,300 power plants to 145 million consumers. The grid also includes 60,000 miles of high-voltage lines, millions of miles of distribution lines and more than 50 million transformers.

On-the-job training

Described by the U.S. Department of Energy as one of the nation's highest-paid professions that doesn't demand postsecondary education, becoming a journeyman lineworker typically requires a high school diploma or equivalent, training and a paid apprenticeship, which generally spans four years. Apprentice lineworkers receive hands-on training and experience in the field before advancing to "journeyman" status.

Powering our communities

Restoring electricity after a power outage is just one of the many duties of lineworkers and is often the most visible. In addition, lineworkers perform many other essential services that power Iowa's communities. Some of these responsibilities include:

- Installing and connecting new power lines to homes and businesses;
- Maintaining and performing upgrades to improve our electric grid;
- Diagnosing and pinpointing power delivery issues;
- Planning and managing large-scale projects; and
- Ensuring safe work practices in often challenging conditions.

Inspiring safety

Each year, lineworkers respond to devastating storms and the damage they leave behind. In addition, lineworkers face various dangers, including electric shock, falls from elevated work locations and roadside traffic accidents.

Lineworkers climb utility poles with up to 40 pounds of safety gear and tools.
Photo Source: Dennis Gainer

Safety is always the number one priority, so lineworkers continuously receive training to stay mindful of safety requirements and up to date on the latest equipment and procedures.

The next time you see a lineworker, remember to thank them for their essential work. And always remember to move over or slow down if you see any vehicle stopped on the side of the road with flashing lights activated. Our lineworkers and their families thank you!

Scott Meinecke is the director of safety and loss control for the Iowa Association of Electric Cooperatives.

EDITOR'S CHOICE CONTEST

WIN A \$100 GIFT CARD TO A LOCAL GARDEN CENTER!

It's gardening season! Whether you are planting a garden or a pollinator habitat, it's rewarding to create the perfect backyard oasis. To help your green thumb this season, we're giving away a \$100 gift card from a local garden center.

Visit our website and win!

Enter this month's contest by visiting www.ieclmagazine.com no later than April 30, 2024. You must be a member of one of Iowa's electric cooperatives to win. There's no obligation associated with entering, we don't share entrant information with anyone and multiple entries from the same account will be disqualified. The winner of the Express Finish Toaster from the February issue was James Denney, a Southwest Iowa REC member-consumer.

ENTER ONLINE BY APRIL 30!

OPERATIONS: SPRINGING FORWARD WITH NEW PROJECTS

BY JOSH OLTMANN

On Page 12 of this issue you can read about the new metering system Guthrie County REC will be installing for all our member-consumer accounts. As you can imagine, it has been quite a feat to prepare for this large undertaking. Since the beginning of the year, our crews have been working to install antennas in our substations that will connect these meters to the co-op and feed information on power usage in almost real-time.

Our work in the Perry area of our service territory continues to dominate our time as we concentrate on building a new substation. In our “Bluejay” substation, we’ve installed the switchgear, an electrical system that controls and protects the electrical equipment in the event of a fault. We also completed a loop feed in the Perry Industrial Park that will ensure reliable service for the businesses there. Additionally, we will break ground on another new substation near Hamlin in the next few months.

A new housing development near Stuart is expected to bring more than 50 homes onto our system and

in the next few months, crews will be working on building new lines to connect those future member-consumers to our system. Additionally, our commitment to reliability means we will begin our annual rebuilding of more than 15 miles of aged line.

Lastly, the growing season started early this year, so we have already been out working to make sure vegetation doesn’t impede our power lines. This, along with annual line maintenance, will help keep the power flowing safely and reliably to you.

Josh Oltmann is the line superintendent for Guthrie County REC.

KILEY ATTENDS REC DAY ON THE HILL

The sun was shining on more than 200 employees and elected directors from Iowa’s locally owned rural electric cooperatives (RECs) as they convened at the Iowa Capitol March 12 to advocate for important issues during the annual “REC Day on the Hill” event.

Guthrie County REC Director Julie Kiley joined the statewide advocacy effort.

Office
1406 State Street • P.O. Box 7
Guthrie Center, IA 50115-0007

Office Hours
Monday through Friday, 8 a.m. - 4:30 p.m.

Telephone Number
641-747-2206 or 888-747-2206
Calls answered 24 hours a day, 7 days a week

Website
www.guthrie-rec.coop

This institution is an equal opportunity provider.

“I think it’s very important to be able to meet with our legislators face to face,” Kiley says. “I enjoy the chance to speak with them as well as representatives from our fellow electric cooperatives.”

Advocates asked elected officials to ensure reliable electric service for Iowans by supporting an “all-of-the-above” electric generation strategy. Specifically, Iowa’s electric cooperatives believe it’s time to update the state’s 2001 advanced ratemaking principles (ARPs) to stipulate an all-of-the-above approach and include nuclear and energy storage technologies.

Also related to reliability, advocates talked with their legislators about Integrated Resource Plans (IRPs) and the potential pitfalls of requiring Iowa utilities to file IRPs as part of contested case proceedings before the Iowa Utilities Board. IRPs will increase administrative and legal fees, which must ultimately be paid by ratepayers. In other states, IRPs have served as a pathway to the premature closure of carbon-based

Guthrie County REC Board Member Julie Kiley, center, visits with Rep. David Young during REC Day on the Hill March 12.

power generation facilities, which negatively impacts electric reliability.

Additionally, co-op representatives discussed the issue of “right of first refusal,” which allows incumbent, established utilities to have the first option to construct, maintain and operate electric transmission projects. Iowa’s electric co-ops are best prepared to respond locally to weather-related outages because we have a proven track record of restoring power quickly and safely.

During the advocacy event, representatives educated legislators on the benefits of the not-for-profit cooperative business model, which includes local ownership, democratic governance and cost-based rates.

BOARD APPROVES 2024 BUDGET

At its Jan. 23 meeting, the Guthrie County REC board approved the \$16.5 million budget for 2024 that aligns the cooperative with its mission to provide safe, reliable and affordable electric power to our member-consumers.

Investing in infrastructure

The \$8.5 million Construction Work Plan will fund the purchase of upgraded oil circuit reclosers in the co-op's substations, new AMI meters for all co-op accounts (see Page 12 of this issue), and \$2.4 million each for construction and equipment in the Bluejay substation near Perry and Mockingbird substation near Hamlin. The co-op has also budgeted to purchase a new excavator and trailer, a new \$356,000 basket truck (2029 delivery) and a new locator with fault finder for identifying trouble spots in underground wires.

Cost of power

The largest component of the cooperative's budget every year is

the cost to purchase power from our power supplier, Central Iowa Power Cooperative. This year, that encompasses 69% of our budget or \$11.7 million, which is down slightly from last year. As a distribution electric cooperative, we rely on the stability of the power provided to us so that we can make it economical for our member-consumers at the end of the line.

The Guthrie County REC board of directors is made up of member-consumers just like you who work hard throughout the year to make sure the cooperative runs as efficiently as possible. Each year, the cooperative takes a hard look at the numbers and works to build a budget that makes good fiscal sense while also being cost-effective.

While we can't always predict issues that may affect our bottom line, we promise to minimize them as much as possible to keep them from having a negative impact on your monthly bill.

IMPORTANT NOTICE REGARDING NEW AUTOMATED CALL SYSTEM

With our new messaging system, Guthrie County REC can now make automated calls to our member-consumers.

Please be aware that calls regarding delinquent bills and past-due notices on your electric bill will now come from the automated system and NOT a Guthrie County REC office employee.

Delinquent notices will still be mailed out at the beginning of the month stating the amount past due and date of disconnection – typically the 15th of the month. Automated calls will be made any time after the 15th of the month. The automated call will state that we are calling in regard to your account needing attention and our office number will be listed. Please call us back to discuss your account if you have any questions.

If we have not heard from you regarding your account, we will post the property two days after the automated call has been made and charge a \$50 posting fee. It is important that you call us to avoid this extra charge!

We understand that scams threatening to disconnect your power have been increasing; however, our automated call will not ask for any payment information or personal information. You can always contact our office directly at 888-747-2206 to speak with office staff who can verify calls.

We appreciate your patience and understanding as we implement this new feature to better serve you!

THANK YOU, LINEMEN!

April is the month we pay special tribute to the hardworking men and women who keep the power flowing to our homes, businesses and communities. Their presence in the field as they work on Guthrie County REC's lines is perhaps the most visible connection our member-consumers have to their co-op. If you see them out working, please take a moment to say hello and thank them for the work they do!

Guthrie County REC line crew pictured from left to right: Jeff Eagle, apprentice lineman; Bailey Benton, apprentice lineman; Jeremy Gruber, line crew foreman; Jalen Spack, line crew foreman; Jordan Terwilliger, journeyman lineman; Brian Marso, journeyman lineman; Josh Oltmann, line superintendent; Todd Tinken, journeyman lineman; and Keith Hise, journeyman lineman.

ELECTRIFIED AGRICULTURAL EQUIPMENT

BY JENNAH DENNEY

The electrification trend in agricultural equipment has gained momentum in recent years as farmers increasingly embrace electric vehicles and machinery. This shift offers numerous advantages, including reduced carbon emissions, lower operating costs, improved energy efficiency and quieter operation.

Smaller electric equipment, such as irrigation systems and utility vehicles, are becoming increasingly popular. Many farmers are now using electric motors in place of older, inefficient diesel motors for farm irrigation.

Larger agricultural equipment can be difficult to replace with electric alternatives due to their weight. In response, manufacturers are developing tractors that are more compact,

lower in weight and feature battery-powered options. The compact and lighter design of these tractors allows for better maneuverability in smaller farming spaces, improving efficiency and productivity in the field. For example, a small orchard farmer may opt for a compact electric tractor instead of a larger, traditional tractor. The smaller size and electric power allows farmers to easily navigate between rows of trees without causing damage to the fruit or soil, ultimately increasing the yield and reducing maintenance costs.

In addition to smaller equipment, drones equipped with electric agricultural technology are proving to be valuable in many cases. Electric drones allow farmers to monitor crops, perform precision spraying and even participate in crop pollination. Equipped with

specialized sensors and cameras, these drones capture high-resolution imagery to help farmers make informed decisions about crop management. The versatility and cost-effectiveness of electric drones make them a valuable tool for optimizing crop health, detecting pests and enhancing irrigation practices.

Use for various types of farming operations

Here are some common types of farming operations that benefit from electrified agricultural equipment.

Crop farming: Electric equipment, such as tractors, sprayers and harvesters are used in crop farming operations for tasks like plowing, planting, spraying pesticides, drying and harvesting crops.

Livestock farming: Electric equipment can be utilized in livestock farming

THE FUTURE OF ELECTRIFIED AG

Many farmers are making the transition from gas-powered equipment to electric models. Electric-powered farming equipment offers lower operating costs, improved efficiency and quieter operation. Here are a few ways the electrification trend is gaining momentum on the farm.

- 1 Electric tractors** show promise for increased efficiency and reduced maintenance.
- 2 Electric motors for irrigation** are more efficient than diesel motors and result in greater cost savings for farmers.
- 3 Drones equipped with electric agricultural technology** make them a valuable tool for optimizing crop health, detecting pests and enhancing irrigation practices.

for tasks such as feeding, milking and waste management.

Vineyards and orchards: Electric pruning equipment can be used in vineyards and orchards for precision pruning of grapevines, fruit trees and bushes.

Greenhouses and nursery operations: Electric equipment such as tillers, seeders and potting machines are often used in greenhouse and nursery operations for efficient soil preparation, seeding and transplanting.

Organic farming: Electrified agricultural equipment is also used in organic farming operations, with a focus on sustainability and environmentally friendly practices. Electric tools and equipment help minimize the use of fossil fuels and reduce emissions.

Benefits of electrified ag equipment
Electrified agricultural equipment offers several benefits beyond reducing carbon emissions.

Electric drivetrains are simpler and easier to maintain compared to traditional tractors, resulting in lower maintenance costs. Additionally, electric equipment is more energy efficient, converting a higher percentage of electrical energy into usable work.

Electricity flowing through batteries and electric motors is more efficient than diesel being delivered to farms, moved into tanks and burned in diesel engines. As battery technology advances, further improvements in electric farming equipment are expected.

This efficiency leads to reduced energy consumption and lower operating costs for farmers. Additionally, the quieter operation of electric equipment minimizes disruptions to nearby communities, livestock and wildlife, making it ideal for residential areas or sensitive environments.

Considerations for farmers

When considering electrified equipment, farmers should evaluate their specific needs, including power requirements and operational tasks. Farmers should work with their local electric cooperative to assess the farm's power supply capacity to ensure it can handle the additional load without causing issues. By conducting a thorough analysis of their unique needs and goals, farmers can determine if adopting electrified agricultural equipment is a suitable and advantageous option.

The electrification of agricultural equipment presents a promising future for farmers. Farmers can improve operational efficiency and benefit from cost savings by embracing electric vehicles, machinery and drones.

Jennah Denney writes on consumer and cooperative affairs for the National Rural Electric Cooperative Association, the national trade association representing more than 900 local electric cooperatives.

EGG-CEPTIONAL

RECIPES

FAMILY BREAKFAST CASSEROLE

- 1 pound sausage
- 6 slices white bread
- 4 large eggs
- ½ teaspoon salt
- 1 teaspoon mustard powder
- 2 cups whole milk
- 1 cup mild cheddar cheese

Cook sausage on low heat, then drain. Line bread in a 9x13-inch pan sprayed with olive oil. Mix eggs, salt, mustard powder and milk; stir in sausage. Pour over bread and sprinkle cheese over egg mixture. Cover and refrigerate overnight. Bake covered at 325 degrees F for 45-60 minutes. Uncover and bake for 30 minutes. Serves 6-9

Arlene Husak • Toledo
T.I.P. Rural Electric Cooperative

CRUSTLESS CUSTARD

- 6-8 egg yolks
- ½ cup sugar
- 2½ cups half-and-half (or milk)
- 1 teaspoon vanilla
- ½ teaspoon nutmeg
- ½ teaspoon cinnamon

Beat all ingredients together. Pour in pie pan or custard cups and bake at 450 degrees F for 15 minutes. Turn oven down to 350 degrees F and continue to bake until knife comes out clean. Serves 8

Sara Riley • Conrad
Grundy County Rural Electric Cooperative

BREAKFAST FRENCH TOAST

- butter, to coat bowl
- 2 eggs, beaten
- 1 tablespoon milk
- 2 slices dry bread
- cinnamon, to taste

Coat a microwavable bowl with butter, then add eggs. Add milk and beat. Break up dry bread and combine with egg mixture. Shake cinnamon on top as desired. Microwave 1 minute, stir, then microwave 1 more minute.

Ken and Jill Leafgreen • Fairfield
Access Energy Cooperative

NO CRUST CRAB QUICHE BAKE

- 8 eggs (or 16 ounces liquid egg product)
- 2 cups half-and-half
- 1 red pepper, chopped
- 8 ounces imitation crab meat, chopped
- 1 cup bread crumbs
- 1 cup Swiss or mozzarella cheese
- 1 cup cheddar cheese
- 2 green onions, chopped
- ½ teaspoon salt
- ¼ teaspoon pepper

Combine all ingredients in a bowl, then transfer to a greased 9x13-inch baking dish. Bake at 350 degrees F for 30-40 minutes or until a knife inserted in the center comes out clean. Let stand for 10 minutes to set up. Serves 6-8

Diana Thorn • Marshalltown
Consumers Energy

CARB-FREE EGG BAKE

- 2 cups sausage, cooked and crumbled
- 1 garlic clove, minced
- ½ cup onion, chopped
- 12 eggs
- ¾ cup half-and-half
- ¾ cup sour cream
- 1½ cups cheddar cheese
- 1 teaspoon salt
- ½ teaspoon pepper

Cook sausage, garlic and onion, drain off grease. In a large bowl, whisk together eggs with half-and-half. Add sour cream, cheddar cheese, sausage mixture, salt and pepper. Mix well and pour into buttered 9x13-inch pan. Bake at 350 degrees F for 40-60 minutes. Recipe can be refrigerated and baked the next morning. Serves 10-12

**Glenda DeBoer • Rock Rapids
Lyon Rural Electric Cooperative**

AIR FRYER EGG FOR ONE

- 1-2 tablespoons picante sauce
- 1 egg
- 1-2 tablespoons cheddar cheese, grated

Preheat air fryer to 370 degrees F. Spray a custard dish or similar dish with non-stick cooking spray. Add picante sauce. Break egg on top of sauce and sprinkle with cheese. For a runny yolk, air fry for 6 minutes, add more time for a firm yolk. For a sodium-restricted diet, reduce sauce and cheese. Serves 1

**Sandra Lacey • Danbury
North West Rural Electric Cooperative**

EGG SPINACH CASSEROLE

- 2 10-ounce packages frozen spinach
- 1 pound sausage
- ½ cup onions
- 7 eggs
- 4 cups cottage cheese
- 6 tablespoons flour
- 8 ounces cheddar cheese
- 3 tablespoons butter
- optional: broccoli, asparagus

Quickly thaw spinach in colander under hot water and drain well. Spinach can be substituted with broccoli or asparagus. Cook sausage with onions, drain. In a large bowl, mix spinach, sausage, eggs, cottage cheese, flour and cheddar cheese. Put mixture in a greased 9x13-inch pan and dot with butter. Cover and bake at 350 degrees F for 1 hour. Serves 10-12

**Trudy Woolman • Stuart
Guthrie County Rural Electric Cooperative Association**

BACON EGG CASSEROLE

- 6 slices bacon, diced
- 1 teaspoon minced garlic
- 1 small onion, diced
- 1 red bell pepper, chopped
- 1 green bell pepper, chopped
- 12 eggs, beaten
- ½ teaspoon salt
- ¼ teaspoon pepper
- 1-2 cups shredded cheddar cheese

In a large skillet, cook bacon over medium heat until it becomes soft. Add minced garlic and onion, and cook until bacon begins to brown. Add red and green peppers, cover and cook for 5-10 minutes or until the veggies are soft and bacon is browned, stirring occasionally. Remove from heat and let cool. In a medium bowl, whisk together eggs, then add salt and pepper. Add cooled bacon and veggie mixture to the beaten eggs and stir. Add cheese and pour into greased 9x13-inch baking dish. Bake at 350 degrees F for 25-30 minutes or until top is set. Let cool slightly before serving.

**Kathryn Meyer • Rowan
Prairie Energy Cooperative**

DIGGING FOR DOLLARS: HOW TO SAVE MONEY IN THE GARDEN

BY GEORGE WEIGEL

Plant prices are up sharply. So are insecticides, fertilizers, deer repellents, mulch, tools and other accessories gardeners use to keep their green investments alive. Even bagged dirt is no longer dirt cheap. What's a gardener on a tight budget to do? Fortunately, this is one pastime that lends itself to lots of belt-tightening strategies.

Ways to save on plant purchases

Consider perennials relegated to a bargain rack after they've finished blooming for the season. Annuals and vegetables that are still viable but unsold after the spring rush are another great way to save. You can also look for trees and shrubs that are misshapen markdowns but fixable via pruning and patience. Tulips, daffodils and other spring-blooming bulbs are often 50% off when unsold but still plantable by the end of October.

If you shop local, get on your favorite garden center's loyalty program.

These programs offer discounts, coupons, rewards and special sales to regular customers. While you're at it, let local garden center managers know you're interested in plants they want to clear out.

Pay attention to unconventional sources including plant societies, Master Gardeners, libraries, public gardens, farmers markets, schools and garden clubs – all of which often hold plant sale fundraisers using divisions from members' yards, locally started seedlings and discounted greenhouse transplants.

Ways to trim the plant budget

Wherever you buy plants, opt for less-expensive smaller sizes. Given patience and good growing conditions, a quart-sized perennial will end up at the same mature size as a gallon-sized one but at a significantly lower starting price.

Opting for small especially saves on trees, which can double in price for just two or three feet of additional height.

Starting new plants from seed yields way more plants to the dollar than transplants. Planting seeds directly in the ground outside is even less expensive, bypassing the need for lights, pots and potting mix.

A third plant budget-stretcher is mining your own plants for expansion. Most perennial flowers can be dug and divided into fist-sized pieces after several years of growth, giving you free plants to use elsewhere.

Check with friends and neighbors to see if they'd like to trade divisions, which can yield free new varieties for your yard. New shrubs, trees, roses and evergreens can be created by snipping 4- to 6-inch pieces off the tips of "mother plants" and sticking them into moist potting mix. That induces roots to grow from the buried cut ends, giving you a new "baby" copy of the plant.

Potted plant savings

Save on your potted plant budget by starting with fewer plants each season. With patience, pots of fewer premium-priced potted annuals will fill in eventually and cost less than tightly packed ones.

Another pot option is scavenging the yard for perennial flowers you can dig and divide to use in pots. The best are ones with colorful foliage that add interest beyond the few weeks they're in flower, such as coralbells, hostas, golden sedge, variegated liriopse and ferns. Return the perennials to the ground in fall to overwinter and mine again next year.

Most so-called "houseplants" (crotons, palms, snake plants, peace lilies, rubber plants, etc.) are tropical or sub-tropical species that do perfectly fine outside in northerly summers and inside over winter.

Ways to save on gardening products

The fastest way to save on gardening products is to cut out things your plants don't need and reduce the amounts you use, such as fertilizer.

Plants take up only the nutrients they need. Adding more doesn't make them grow bigger or better and is a waste of money.

If plants are growing well, there's usually no need to add anything. If they're not, a soil test will tell if lack of nutrition is a culprit – along with precisely what nutrients are needed and in what amounts. Extension offices and many garden centers offer inexpensive DIY soil-test kits to help you spend fertilizer dollars wisely

Bug and disease sprays are another potential cost-saver. Some gardeners routinely use pesticides "just in case," wasting money and potentially killing beneficial insects that would've controlled pest bugs naturally (and at no charge).

Expensive potting mix can be stretched by mixing your own from bulk ingredients or by "refreshing" last year's saved mix with half new mix.

George Weigel is the author of five gardening books and is a special contributor to Iowa Electric Cooperative Living magazine.

Perennials with colorful foliage, such as the coralbells in the middle of this container, can be dug and used in pots to trim the flower budget.

Dividing clumps of expanded perennials is a way to add plants at no charge.

Saving your own seeds to plant next year is a practice that cuts the seed-buying budget.

Ground-up wood chips from tree branches makes a good landscape mulch – and sometimes is available free from local tree companies.

Yard sales are one unconventional source where you might find plant bargains.

Plants are less expensive when you start them from seed vs. buying transplants that are greenhouse-grown.

SIX MONEY-SAVING GARDENING PRACTICES

Changes in how you garden is an avenue for limiting expenses. Here are six tips to consider:

- 1 Make the most of retail seed.** Most seeds bought in packs are good for two or more years, especially if you store them in a cool, dry place (the refrigerator is perfect). If the packs have more seed than you can use, share or trade with gardening friends and neighbors or look for seed swaps.
- 2 Make your own compost.** Start a pile or two where you can recycle your property's leaves, grass clippings, spent plants and kitchen scraps into highly nutritious (and free) compost.

If you buy bagged compost (or soil or mulch), look for discounted broken bags.

- 3 Watch for annuals that pop up on their own.** Flowering annuals might sprout in spring from your own self-seeders as well as seeds brought in by

birds, bugs and the wind. If you recognize these as flowers and not weeds, you've just been gifted with free flowers.

- 4 Take season-long advantage of all vegetable garden space.** Many gardeners plant veggies once in spring, then let the space empty after harvest. Reload harvested space with new crops planted in summer to fully use the growing season.
- 5 Save water by letting lawns go dormant during a hot, dry summer spell.** Most turfgrass can survive without water for at least three or four weeks after going brown in a summer-survival dormant state. There is no need to water until then.

- 6 Save on mulch by covering bare ground with low, spreading ground cover plants.** Examples are creeping sedum, creeping thyme, leadwort and liriopse. You'll pay more at planting time, but as the plants spread, they'll hold down weeds without having to buy mulch.

NEW METERS HELP US SERVE YOU BETTER

Guthrie County REC will be installing new, automated meters over the next three months to increase the efficiency and reliability of our electric system. Improving the efficiency of both operations and electricity delivery helps us keep costs down for member-consumers.

The biggest change? With the new automated meters, Guthrie County REC will be able to read meters remotely from the co-op office. Remote meter reading will save us time, labor and money.

Your kilowatt hour rates will not change. Your first bill following the installation will show two readings: one from the old meter and one from the new meter.

Reliability and efficiency benefits

In addition to reducing operational costs, the new meters, which can receive and send information to computers at the co-op office, will help improve the reliability of our system. The new technology allows us to detect problems more

quickly and to locate outages more precisely. In some cases, we will be able to fix the problem before you know your power has been out.

The new technology can help us monitor the electric system in almost real-time. We can use this information to make the process of delivering power much more efficient. Member-consumers can also expect to experience fewer blinks, surges and spikes as a result of the upgrade.

The meters, which provide daily information about power use,

will help member-consumers understand how and when they are using electricity. Armed with this information, Guthrie County REC customer service representatives will be in a better position to help member-consumers address billing inquiries.

At Guthrie County REC, taking advantage of new technologies is one more way that we are looking out for our member-consumers. Please watch for updates on our website and our Facebook page.

HOW ENERGY POLICY IMPACTS YOU

BY LOUIS FINKEL

Change is a constant in today's energy industry. And electric co-ops across the country are leaning into change as we explore new ways to meet tomorrow's growing energy needs.

Electric co-ops play a crucial role in ensuring the lights come on every time Americans flip the switch. Our primary responsibility is to our members, and we remain committed to providing service that is both reliable and affordable. Energy policy has a profound impact on our ability to accomplish those goals, and our national energy policies must embrace this fundamental promise.

The North American Electric Reliability Corporation (NERC), the watchdog for our nation's grid, has issued several warnings about threats to grid reliability, warning that rolling interruptions of service could soon be the new norm. Nine states experienced interruptions of service in 2022 when electricity supply simply could not keep up with demand. And over the next five years, NERC forecasts that all or parts of 19 states from Montana to Louisiana are at high risk of rolling outages during normal peak conditions.

These warnings should not be taken lightly, which is why electric co-ops are pressing policymakers to recognize the need for time, technology development and new infrastructure alongside policies that include a diverse mix of energy sources to maintain reliable power.

Challenges to reliability

The economy of the future will be heavily reliant on electricity. From data centers and manufacturing to electric vehicles and electric heat pumps, the demand for electricity is set to rise dramatically. Co-ops are planning for this surge in demand by investing in infrastructure, technologies and

power supplies that will allow them to meet members' needs, but additional challenges lie ahead.

Opposite this increasing demand for electricity, many power plants that generate always-available electricity are being shut down without adequate replacements, posing a significant threat to reliability. The Environmental Protection Agency (EPA) is pursuing sweeping new regulations that would force the premature closure of always-available power plants while also making it harder to permit, site and build critical new plants. Electric co-ops have urged the EPA to withdraw these proposed regulations that would lead to more outages, higher costs and uncertainty for Americans.

A proactive approach

Electric co-ops are at the forefront of innovation and are already adapting to the unique needs of the members we serve. From community solar projects and energy efficiency programs to carbon capture and

advanced nuclear generation, co-ops are leading the way.

Advocating for rational policies in Washington, D.C., that preserve reliability and affordability is crucial. This month, electric cooperative leaders will gather in the nation's capital for the annual Legislative Conference, where they will meet with members of Congress and federal agencies to discuss key issues and concerns surrounding reliability. These meetings allow co-ops to educate policymakers on the issues that matter most to the American families and businesses we serve.

Today's energy decisions and policies will determine if there are enough resources to meet tomorrow's energy needs. Electric co-ops will continue advocating for their members to ensure a reliable supply of electricity that powers everyday life.

Louis Finkel is the senior vice president of government relations for the National Rural Electric Cooperative Association, the national trade association representing more than 900 local electric cooperatives.

CELEBRATE EARTH DAY: WHY TAKING STEPS TO CONSERVE MATTERS

BY MIRANDA BOUTELLE

Earth Day is April 22, a time when we celebrate this beautiful planet we are lucky to call home. During this day of appreciation, it's a great time to take action at home by making changes to conserve energy. If we all contribute, even small adjustments and changes to how much energy we use can have positive impacts.

Conservation vs. efficiency

Before diving into ways to use less energy, it's important to know the difference between conservation and energy efficiency. Energy efficiency refers to equipment that uses less energy to do the same job. For example, ENERGY STAR®-certified refrigerators keep food just as fresh as standard models but use about 9% less energy to do it, according to the U.S. Department of Energy. Conservation is using less energy by changing behavior and practices. For example, adjusting your thermostat to be closer to the temperature outside during

warmer months or turning off the lights or a ceiling fan when you leave the room conserves energy.

Conservation has the best return on investment. It's often free and can save a little or a lot – depending on what you are changing and how drastic of a change you make.

Tackle the biggest energy users

The biggest energy user in the average household is heating, ventilation and air conditioning (HVAC) equipment. Keep your house a little warmer in the summer and a little cooler in the winter. A good rule of thumb is to set the thermostat to 68 degrees F in the winter and to 78 degrees F in the summer.

Typically, the second biggest energy user is the water heater. Replacing an electric storage water heater with a heat pump/ hybrid water heater is an excellent example of an energy-efficient project. Adjusting the temperature

setting to the recommended 120 degrees F and using less hot water in your home conserves energy. Wash clothes in cold water. When washing dishes, don't let the hot water run longer than necessary.

Earth Day also lends itself to thinking of ways we can connect with each other and limit screen time. Look for electricity-free opportunities with your family or community. Consider unplugging and getting outside with friends and family. Going for a hike, a walk or even just spending time in your yard or local park is a great way to reconnect with others and nature. Before you head out, adjust that thermostat and turn off everything possible. Unplug chargers from outlets and turn off all electronics and lights.

Miranda Boutelle writes on energy efficiency topics for the National Rural Electric Cooperative Association, the national trade association representing nearly 900 electric co-ops.

Even small changes, including unplugging chargers from outlets and turning off lights, conserve energy in your home.

On Earth Day, think of ways your family can limit screen time and connect with each other.

Look for electricity-free opportunities with your family, such as starting a game night.

Before you go for a walk with your two- or four-legged companions, adjust the thermostat and turn off everything possible.

IT'S OK WHEN THINGS MAKE YOU HAPPY

BY DARCY DOUGHERTY MAULSBY

One of my guilty pleasures is trolling thrift shops, garage sales, antique shops and other secondhand stores. My mom's father, Ralph Brown, was one of the original fans of Goodwill, and he passed his love of thrifting onto my mom, who passed it onto me – so that makes me a third-generation thrifter, right?

Some of my favorite finds revolve around dishes and farm-themed items. I savor the moments when I'm sipping green tea from my blue Fiestaware teacup and saucer, which I scored at the Coralville Goodwill last summer. One of my latest quirky finds came from the Goodwill in Spencer – two cow-themed mugs for 99 cents each. Cartoon designs of Holstein cows on vacation to the Black Hills, Florida, Mardi Gras in New Orleans and a ski resort in Colorado make me smile.

When I posted a picture of these fun mugs on my Facebook page, one of my friends shared this comment:

“Adorable! I have a picture on my wall of a farm wife milking her Jersey cow, out in a pen with a chicken or two and a small cat. I bought it at an auction years ago and love it – just because. I couldn't begin to explain to anyone what thoughts it conjures up for me when I look at it. Some days, I am so thankful

I've lived long enough to have time to just sit, think and remember.”

Research connects happiness to ordinary things

This got me thinking – can things truly make us happy? Is it OK if they do? For years, we've been advised that if we want to be happier, we should invest in experiences rather than things. But what about those go-to purchases of ours – maybe those comfortable boots, an interesting coffee mug or fresh-cut flowers – that just make us feel good?

It turns out that the material things in our lives aren't incidental to our happiness. That's according to Ingrid Fetell Lee, author of “Joyful: The Surprising Power of Ordinary Things to Create Extraordinary Happiness.”

Her research shows that the objects in our surroundings can have a surprisingly powerful influence on our emotional well-being.

Take flowers, for example. Studies show that just being exposed to flowers can lift our mood, reduce anxiety, improve memory and even decrease the pain medication patients use in a hospital after surgery.

Manmade objects can have similar effects. Did you know that objects with round or symmetrical shapes are known to elicit positive emotions, while sharp, angular, asymmetrical objects are associated with tension and sadness? That helps explain

why I love the glossy, round, bright red teapot I purchased at a local thrift shop for \$2.

It's clear that objects can affect our happiness in deep ways, some that we aren't even consciously aware of. My advice? Choose items that enhance your joy and well-being rather than detract from it.

Linking the past and present

Objects that inspire joy give you a lasting sense of pleasure. Not only do these items connect you to the past (I'm thinking of the antique oak secretary/desk with a beveled, oval mirror in my living room), but the feelings they evoke are equally potent in the present.

Rather than thinking of our favorite things as wasteful or unnecessary indulgences, let's consider them treasures that can bring out our best selves.

Do you have an item that makes you happy every time you look at it or use it? Tell me about it at yettergirl@yahoo.com. I look forward to hearing from you.
