## ON THE COVER

Special thanks to Ryan Van Dyke, a North West REC member-consumer, for supplying this month's cover image. Submit high-resolution photos for consideration to [editor@ieclmagazine.com](mailto:editor@ieclmagazine.com). You could receive \$100!

# LOVE IS IN THE AIR AND ON THESE PAGES

BY ANN FOSTER THELEN

Love is in the air in February, and Valentine's Day gives us an opportunity to share heartfelt messages of adoration. It is also a fitting

time to reflect on something we care deeply about at *Iowa Electric Cooperative Living*. Each month, we have the privilege of creating a magazine for you, our electric cooperative member-consumers, and that connection is at the heart of everything we do.

This magazine has always been about more than turning pages. It is about strengthening ties to your local electric cooperative, sharing stories rooted in Iowa communities and offering practical information you can use every day. Whether it is a recipe clipped for later, an energy tip put into action, a safety tip that prevents an injury or a story that sparks conversation at the kitchen table, our goal is to serve you well.

## Powered by our readers

One of the things we love most is the engagement we receive from readers across the state. You send in cover photo submissions that showcase Iowa's beauty in every season. You share favorite recipes that turn into family-tested meals for kitchens far beyond your own. You suggest story ideas, enter contests, respond to features and let us know what resonates with you.

That kind of participation does more than fill pages. It reminds us that this magazine is not a one-way conversation. It is a shared space where your voices, creativity and experiences help guide what we publish. When you take the time to reach out, you help make *Iowa Electric Cooperative Living* stronger and more relevant for everyone.

This magazine also reaches beyond individual readers. It is shared with community leaders, policymakers and others who help shape decisions affecting rural Iowa. By telling local stories and explaining how electric cooperatives work, these pages help build understanding of the cooperative model and the value it brings to the communities we serve.

## Connecting locally, living cooperatively

Your readership reinforces something we believe deeply. This publication matters because it reflects what matters locally. Readers consistently show that they value content that helps them feel informed, connected and engaged with their electric cooperative. That includes learning how cooperatives work, understanding cooperative principles and seeing how local co-ops serve their communities every day.

We hope these pages also encourage you to take part in cooperative life beyond the magazine. Attend your cooperative's annual meeting. Vote for directors who help guide important decisions. Participate in youth programs, educational opportunities or advocacy efforts that give member-consumers a voice. These experiences strengthen the cooperative business model and keep it rooted in local leadership.

At its core, *Iowa Electric Cooperative Living* exists to support the same mission as your local electric cooperative. It is about service, transparency, education and community. As we move through February and beyond, thank you for reading, engaging and being part of this shared effort. We look forward to continuing to serve you and your community, one issue at a time.

*Ann Foster Thelen is the editor of Iowa Electric Cooperative Living magazine.*

## EDITOR'S CHOICE CONTEST

### WIN AN ECOBEE SMART THERMOSTAT!

The ecobee smart thermostat automatically adjusts to your set schedule to save energy when you're gone and optimize for comfort when you're home. Fine-tune your comfort on the thermostat's color touchscreen or from the ecobee app. Works with major smart home ecosystems like Apple Homekit.

#### Visit our website and win!

Enter this month's contest by visiting [www.ieclmagazine.com](http://www.ieclmagazine.com) no later than Feb. 28. You must be a member of one of Iowa's electric cooperatives to win. There's no obligation associated with entering, we don't share entrant information with anyone and multiple entries from the same account will be disqualified.

The winner of smart bird feeder from the December issue was **Julie Tjepkes**, a **Grundy County REC** member-consumer.

ENTER ONLINE BY FEB. 28!

# RELIABILITY REQUIRES INVESTMENTS

BY COZY NELSEN

If you were among the co-op members who attended our annual meeting last month, thank you! The event is an opportunity to gather,

share news, celebrate and conduct co-op business. We look forward to it every year.

As we reviewed the financial health of the co-op over the last year, you may have noticed that a significant portion of our expenses go toward investing in upgrades to the operation and maintenance of our system. Reliable electricity doesn't happen by accident. It requires ongoing investments in our local grid to help us operate smarter and more efficiently.

## Maintaining system performance and safety

Since 1938, our cooperative has repaired, replaced, updated

and upgraded our infrastructure to maintain performance and safety. From poles and wires to transformers and substations, every part of our grid has a lifespan. We are continually monitoring and assessing where improvements are needed, as well as where we can be proactive and fiscally responsible with where we place our dollars.

We keep all these things in mind while at the same time, new technologies are reshaping how we operate in response to the growing demand for power. Smart meter and advanced monitoring systems allow us to detect problems faster and respond more effectively. Using these tools, we can isolate problems, reroute power to minimize outages and provide real-time data that helps us plan and maintain our equipment more efficiently.

We scrutinize these investments knowing the return is significant. A strong grid supports economic

growth, improves service quality and enhances safety for our crews and community. Most importantly, it ensures that the essential power you rely on is available whenever you need it.

Please take a moment to look at our 2025 Annual Report, available on our website or by request by contacting the co-op office. Your investment in our cooperative matters, and we want to make sure you're getting the most out of it.

Thank you, again, for being a co-op member and staying engaged in our bottom line. As we continue into 2026, you can be sure we're doing everything we can to make smart choices and be responsible with your investment in us.

## 2026 ANNUAL MEETING RECAP: THANK YOU, MEMBERS!

Nearly 240 members joined their neighbors to attend the Guthrie County REC Annual Meeting Jan. 3.

Board Member Don Schwartz started the meeting by providing an invocation. Vice President Joni Rees then introduced co-op employees, retired employees, retired board directors and special guests in attendance. Secretary/Treasurer Julie Kiley then gave the Treasurer's Report, followed by CEO Cozy Nelsen's report. 2025 Youth Tour participant Annabelle Baggett, a junior at Exira-Elk Horn-Kimballton, shared her experiences

and photos she took while on the trip to Washington, D.C., last summer.

Board President Steve Bireline closed the program with his report on Guthrie County REC's power supplier, Central Iowa Power Cooperative (CIPCO).

If you were unable to attend the annual meeting, please visit [www.guthrie-rec.coop/annual-meeting](http://www.guthrie-rec.coop/annual-meeting) to view the 2025 Guthrie County REC Annual Report. The following are some of the meeting highlights.

## Election results

Ballots were accepted until 12:30 p.m. Jan. 3 and counted by cooperative attorney Denny Puckett. The certified results are:

- **District 4:** Michael Moore, incumbent
- **District 5:** Don Schwartz, incumbent
- **District 6:** Steve Bireline, incumbent

A board reorganization meeting was held following the annual meeting with the following results:

- **President:** Steve Bireline
- **Vice President:** Joni Rees
- **Secretary/Treasurer:** Julie Kiley
- **Asst. Secretary/Treasurer:** Ronny Bristle
- **Representative on the CIPCO Board of Directors:** Steve Bireline

## Milestone recognitions

The cooperative uses the annual meeting time to acknowledge and celebrate employees and board members who have achieved service milestones.

- **Todd Tinken, journeyman lineman:** 15 years
- **Loyd Hise, journeyman lineman:** 15 years

## Prize winners

### GRAND PRIZE

- **Electric grill cart:** Robert and Mary Williamson, Panora

The following are some of the winners of additional prizes following a random drawing of names of those who attended.

- **Casserole slow cooker:** Brenda Dinkla, Panora
- **\$25 American Express gift card:** Denise and Charles Brobst, Panora
- **Boot dryer:** Dan Wittrock, Hamlin
- **Popcorn maker:** Debbie Culver, Menlo
- **Jump starter and air compressor:** Dick Pawlowski, Panora
- **Ninja air fryer:** Larry Kleinwolterink, Yale
- **Household tool set:** Jack Jontz, Panora
- **Towel warmer:** Lila Bilbrey, Panora
- **Ninja Sizzle grill:** Kim and Terry Betts, Coon Rapids
- **Digital calendar:** Trudy Tam, Stuart

Plan now to attend the next annual meeting in early January 2027!

Jerry Beck

# TWO OUTSTANDING INDIVIDUALS HONORED WITH FIRST IOWA ELECTRIC COOPERATIVE EXCELLENCE AWARDS

BY ERIN CAMPBELL

Iowa's electric cooperatives have a new way to recognize the contributions of outstanding individuals within the industry with the introduction of the Iowa Electric Cooperative Excellence Awards Program.

During the 2025 Annual Meeting of the Iowa Association of Electric Cooperatives (IAEC) in West Des Moines on Dec. 4, the Excellence Awards debuted as a way to honor Iowa electric co-op employees and board directors who go above and beyond. Earlier in the year, employees and board directors of IAEC-member cooperatives were invited to nominate colleagues; a panel of judges independently reviewed all entries to select finalists.

The Iowa Association of Electric Cooperatives (IAEC) is a trade association established to support the interests of member-owned electric cooperatives, including 38 distribution co-ops and nine generation and transmission co-ops. Formed in 1942, IAEC aims to unify and empower Iowa's electric cooperatives through legislative representation, regulatory oversight, training and education services, safety programs, communications support and advocacy. Since 1948, IAEC has been publishing this magazine to share timely and relevant energy information with co-op member-consumers across Iowa. Learn more at [www.iowarec.org](http://www.iowarec.org).

## 2025 EMPLOYEE EXCELLENCE AWARD

**Robert Wakehouse**

Director of Operations  
Harrison County Rural  
Electric Cooperative (REC)

Harrison County REC Board Treasurer Brenda Lundergard noted in her nomination how Robert exemplifies the cooperative spirit of collaboration and service. Robert has worked at the electric co-op for more than 26 years and was promoted to director of operations in 2025.

During Robert's first month in his new role, the co-op faced two destructive winter storms. Brenda wrote, "Under immense pressure, Robert responded with clarity, determination and strategic foresight with his quick coordination of mutual aid assistance from partner cooperatives and a

plan to restore power to our membership. His actions have fostered trust, demonstrated the strength of mutual aid and underscored the resilience of our rural electric systems. He leads by example, inspires loyalty among his team and represents the absolute best of what our statewide cooperative family has to offer."

In a letter of recommendation that accompanied Robert's nomination, Harrison County REC CEO Shadon Blum stated, "I have witnessed firsthand the exemplary level of professionalism, leadership and dedication that Robert brings to our cooperative and the communities we serve." He went on to explain, "Prior to his role as director of operations, Robert served as our subforeman and staking technician. During this time, our co-op faced the devastating loss of a valued member of our cooperative family. Robert did not hesitate and stepped up to lead his fellow

crew members to make sure that nothing was left incomplete and the cooperative wasn't falling short of its core mission, to provide our members with safe and reliable power."

## 2025 DIRECTOR EXCELLENCE AWARD

**Jerry Beck**

Board Director  
Iowa Lakes Electric  
Cooperative

Iowa Lakes Electric Cooperative Board Chair Daniel Winterhof shared the following in Jerry's nomination: "Jerry's enthusiasm for the cooperative model goes beyond personal interest; it inspires those around him. Through conversations, mentoring and his consistent example, he fosters understanding of the cooperative principles in both his family and the wider community."

Ken Kuyper, retired executive vice president and general manager of Corn Belt Power Cooperative, shared in his letter of recommendation:

"Jerry has been a cornerstone of Iowa Lake's organization for decades, demonstrating both vision and dependability. His leadership style is rooted in listening, collaboration and action."

Rick Olesen, retired president and CEO of Iowa Lakes Electric Cooperative, wrote the following in his letter of recommendation: "Jerry's gift, as I have related to many of my peers, is his ability to communicate, especially one on one with his director peers, and work through challenging issues to find common ground and build consensus resulting in positive outcomes in support of the member-consumer."

And Jerry's daughter, Elizabeth Beck, shared the following: "What sets him apart is not just his knowledge, but his unwavering commitment to improving the lives of others - through his work, community service and dedication to the cooperative movement. His leadership, vision and integrity consistently reflect the

principles he believes in and the values he has lived by for decades."

As a special surprise, Jerry's daughter attended the IAEC Annual Meeting from out of state to celebrate the award presentation in person.

**Congratulations to Robert Wakehouse and Jerry Beck for being named the first recipients of the Iowa Electric Cooperative Excellence Awards.**

*Erin Campbell is the director of communications for the Iowa Association of Electric Cooperatives.*

# Cajun CLASSICS

## CHICKEN AND SAUSAGE JAMBALAYA

- 2 pounds boneless, skinless chicken thighs
- 1 pound kielbasa, any style
- 2 medium red, green or yellow bell peppers
- 2 medium yellow squash
- 2-3 tablespoons Creole or Cajun seasoning
- salt, to taste
- 2 14.5-ounce cans petite diced tomatoes
- 2 small onions, diced
- 1 pound shrimp, cooked, deveined and peeled
- cooked rice
- fresh parsley, chopped, optional

Cut chicken into bite-size pieces and slice kielbasa into half-inch pieces. Seed, core and cut bell peppers into two-inch strips. Cut squash into bite-size pieces. Grease slow cooker and place chicken and sausage in first. Sprinkle with Cajun seasoning and salt. Pour in diced tomatoes. Top with bell peppers, squash and onions. Cover and cook 7-8 hours on low, or 3-4 hours on high, until chicken is done. Add cooked shrimp and stir to mix. Cook 5-10 minutes longer on low. Spoon jambalaya into bowls of hot cooked rice. Sprinkle with parsley. Serves 8, recipe can be cut in half to serve 4

Jacque Bird • Sutherland  
North West Rural Electric Cooperative

## SHRIMP DIP

- 1 8-ounce package cream cheese
- ½ cup sour cream
- ¼ cup mayonnaise
- 1 cup cocktail sauce
- 2 4-ounce cans tiny shrimp, drained
- crackers

Mix the first three ingredients and spread on a platter. Spread cocktail sauce over top and sprinkle with shrimp. Serve with crackers. Serves 10-15

Laura DeSmet • Larchwood  
Lyon Rural Electric Cooperative

## CAJUN BUTTER CHICKEN BREAST

- 2 teaspoons brown sugar
- 1½ teaspoons mild paprika
- 1 teaspoon dried oregano
- 1 teaspoon salt
- ½ teaspoon garlic powder
- ½ teaspoon onion powder
- ½ teaspoon chili powder, add more if you like heat
- ½ teaspoon cayenne pepper
- ¼ teaspoon cracked pepper, to taste
- 2 large chicken breasts
- 1½ tablespoons canola oil, divided
- 4 tablespoons butter, divided
- 4 cloves garlic, finely chopped
- ½ cup low-sodium chicken stock broth
- rice

Combine the first nine ingredients to make a Cajun seasoning. Slice chicken horizontally in half to make four steaks. Toss chicken in seasoning mixture. Drizzle with ½ tablespoon oil and rub seasoning all over chicken to coat evenly. Heat remaining oil and 1 tablespoon butter in skillet or pan over medium-high heat until combined and hot. Sear chicken in batches for 5-7 minutes each side, until golden or internal temperature is 165 degrees F using a meat thermometer. Remove from pan and set aside to rest for 5 minutes. Meanwhile, reduce heat to medium and melt remaining butter in pan. Sauté garlic about 30 seconds, until fragrant, while scraping any browned bits from the pan. Pour in broth and let reduce for 2-3 minutes, stirring occasionally. Remove from heat and drizzle sauce over chicken. Serve warm with a side of rice. Serves 4

Bryce and Kelly Godbersen • Odebolt  
Raccoon Valley Electric Cooperative

Visit [www.iecmagazine.com](http://www.iecmagazine.com)  
and search our online archive  
of hundreds of recipes in  
various categories.

## CAJUN SHRIMP PASTA

- ½ cup butter**
- 5-6 scallions, chopped**
- ½ cup fresh parsley, chopped**
- ½ head fresh garlic, smashed**
- 1 quart heavy whipping cream**
- ¼ cup spicy seasoning mix**
- 2 pounds raw shrimp**
- ¼ cup Parmesan cheese**
- 1 pound package angel hair or linguini pasta, cooked**

Melt butter on medium-high heat. Add scallions, parsley and garlic. Cook until melted, then turn heat to high and add heavy cream. Add your choice of spicy seasonings to taste (or add a mixture of Chef Paul Prudhomme Magic Seafood Seasonings or Blackened Redfish and Louisiana Cajun Blackened Seasoning). Then add shrimp and cook. Stir the entire time until shrimp are fully cooked. Cover and turn to low or turn heat off. It will thicken as it cools. Add Parmesan cheese and serve over cooked pasta. Serves 10

Russell Hornsby • Bouton  
Guthrie County Rural Electric Cooperative Association

## BANANAS FOSTER BREAD PUDDING

- 5-6 cups bread cubes**
- 2 eggs**
- 2 cups half and half**
- ½ cup sugar**
- ½ teaspoon vanilla**
- ¾ teaspoon cinnamon, divided**
- ¼ teaspoon nutmeg**
- salt**
- 4 tablespoons butter**
- 4 tablespoons brown sugar**
- 4 tablespoons pecans**
- 2 tablespoons rum, optional**
- 2-3 bananas, sliced**

Place bread cubes in greased baking dish. Mix eggs, half and half, sugar, vanilla, ½ teaspoon cinnamon, nutmeg and a sprinkle of salt. Pour over bread. Bake at 350 degrees F for 35 minutes. In a saucepan, melt butter, brown sugar, pecans, ¼ teaspoon cinnamon, a sprinkle of salt and rum, if desired. Heat over medium-high heat until bubbly. Add bananas and cook for 2-3 minutes. Serve bread pudding warm or at room temperature with warm bananas foster sauce. Serves 6

Chris Daniels • Casey  
Guthrie County Rural Electric Cooperative Association

## SPICY CAJUN PRETZELS

- 1 cup corn oil**
- 1 1-ounce package ranch dressing**
- 1 tablespoon Cajun seasoning**
- 1 teaspoon cayenne pepper**
- 1 teaspoon dried dill weed**
- 1 16-ounce package mini pretzels**

Combine oil and seasonings. Break pretzels into pieces and place pieces in roaster pan. Pour seasoned oil over top of pretzels and stir. Bake at 200 degrees F for 2 hours, stirring every 30 minutes. Remove from oven, drain on paper towel. Store until ready to serve. Makes a great party snack!

Tauhni Lang • Russel  
Chariton Valley Electric Cooperative, Inc.

## CAJUN POTATO AND ANDOUILLE SAUSAGE

- 1 pound andouille sausage, sliced (or any sausage)**
- 1 medium onion, chopped**
- 1 red bell pepper, diced**
- 1 green bell pepper, diced**
- 2 cloves garlic, minced**
- 4 medium potatoes, diced**
- 4 cups chicken broth**
- 1 tablespoon Cajun seasoning**
- 1 teaspoon smoked paprika**
- salt, to taste**
- pepper, to taste**
- 1 cup heavy cream**
- ½ cup fresh green onions, chopped (for garnish)**

In a large Dutch oven, add andouille sausage and cook until brown. Remove, drain on paper towel and set aside. Add onion and bell peppers to Dutch oven. Sauté until tender, then add garlic. Add potatoes to vegetables and pour in chicken broth. Stir to combine ingredients evenly. Add seasonings and stir well. Cook until potatoes are tender, then add sausage. Stir in heavy cream. Taste and adjust seasonings if necessary. An additional sprinkle of smoked paprika can be added for extra flavor. Garnish with green onions and serve hot. Serves 6

Tonya Crowl • Ashton  
Osceola Electric Cooperative, Inc.

# COBANK: FORCES THAT WILL SHAPE THE U.S. RURAL ECONOMY

At the end of 2025, CoBank – one of the largest providers of credit to the U.S. rural economy – released its “2026 Year Ahead Report: Forces that will Shape the U.S. Rural Economy.”

The financial services firm said economic uncertainty surrounding U.S. trade policy is much lower than it was a year ago, steadyng the broader outlook for 2026. The reduced market anxiety can be seen in historically low volatility metrics for equity, bond and currency markets, as well as in historically tight corporate credit spreads.

With tariffs fading from the forefront of economic concern somewhat, artificial intelligence (AI) has become the focal point of financial market prognostication. Direct investments in AI and related infrastructure, combined with the wealth effects

from the surging stock market, have conservatively added 1% to U.S. GDP this year. Over the next three to five years, the report indicates AI will likely play out similarly to the oil and gas shale boom between 2010 and 2015 – overproduction of a commoditized product, lower than expected earnings and disappointing industry profit margins.

## U.S. economy: Markets adjust to a new normal

Several indicators suggest the economy will continue to remain steady in 2026. With the year-on-year tariff inflationary effect fading by end of the first quarter, core inflation is likely to resume its downward trend in the second half of the year. Moreover, the Congressional Budget Office estimates the accelerated depreciation provisions in the One Big Beautiful Bill Act will boost GDP

growth by almost a full percentage point next year. The labor market has cooled from the post-COVID cycle and is now more in line with historic norms. Near 4% wage growth and sub 5% unemployment are well within the margin of safety for a growing economy in 2026.

## U.S. government affairs: Tariffs, farm policy and the shifting Washington landscape

The environment in Washington is beginning to change, if ever so slightly. Farm Bill programs have been extended through September, but pressure is growing for Congress to take further action before the next election. Questions surrounding the president's authority on tariffs, a key issue impacting several market sectors and businesses, will also dominate policy discussions in the coming year.

## **Grains, farm supply and biofuels: Ample grain supplies will burden markets in 2026**

Global grain and oilseed markets remain oversupplied, but increased biofuels production and improving export conditions are boosting optimism that prices have passed their cyclical bottoms. Demand for U.S. grains and oilseeds will continue strengthening as low prices stimulate usage. But grain farmers will face hard choices for planting this spring. Prevailing prices of nearly all crops are below the cost of production. Current price ratios indicate soybeans stand to pull acres from all major crops in 2026. High input costs may discourage farmers from planting corn and switch to cheaper alternatives. Farmer affordability remains under pressure and while corn prices have slid, fertilizer prices have not.

## **Animal protein: Investment in efficiency is paying dividends as consumers clamor for protein**

Despite rising price points for meat and poultry, animal protein demand should remain strong in 2026. The combination of higher revenues and falling feed prices is boosting producer optimism for the year ahead, but not to the degree that expansion is expected to proliferate. Livestock supply conditions have grown notably tighter in the last two years and are likely to remain so over the next 12 to 18 months.

As a result, feeding efficiencies and heavier carcasses will remain a focal point in 2026. While optimism in the sector is strong, several headwinds including new and recurring livestock diseases and trade disruptions could constrain growth in the coming year.

## **Dairy: Protein will drive milk checks for the foreseeable future**

Milk protein is poised for an extended bull-market run as demand for protein-based dairy products continues to climb. While demand for full-fat dairy products also remains strong, butterfat has moved to an oversupply situation. Shifting consumer dietary trends suggest protein markets will remain strong for many years to come. And according to data from Circana and Dairy Management Inc., four of the top 10 protein products for absolute unit sales growth in the past 52 weeks were dairy products, including cheese, cottage cheese and yogurt.

## **Power and energy: Patchwork or partnership?**

U.S. electricity consumption is increasing at its fastest pace since World War II. The Department of Energy is using its emergency authority to direct the Federal Energy Regulatory Commission to quickly standardize large load interconnections. If adopted, some of the proposed reforms would mark

a major shift in how large, energy-intensive customers like data centers connect to the grid. While the reforms could expedite grid access for major customers, they may compromise local utility investment and state regulatory authority. That means unified planning and coordination at the federal, state and local levels will be even more critical going forward.

## **Digital infrastructure: Navigating AI's expansion into rural America**

The rise of AI is fueling a historic surge in data-center spending and hyperscalers will increasingly depend on rural America to achieve their ambitious buildout plans. Rural areas offer what hyperscalers like Microsoft and Amazon desperately need: land for sprawling campuses and the ability to collocate data centers with major power infrastructure. Given the business and geopolitical stakes, data center operators are moving fast and writing big checks to reduce friction in rural communities. While these communities face tradeoffs, rejecting data center projects could mean missing out on generational economic benefits.

# SWIPE RIGHT ON ENERGY EFFICIENCY THIS VALENTINE'S DAY

Valentine's Day is quickly approaching, and you might still be looking for an idea for date night. We can help you out with a plan that will not only make the evening special but also save you energy at the same time.

**Make dinner at home.** Skip the crowd this year and make dinner in your own kitchen! You can surprise your significant other or make it together. Make it energy efficient by using microwaves, slow cookers, toaster ovens, rice cookers or grills. These small appliances will save you time and money and bring you closer together. Look for recipe ideas online at [www.iecmagazine.com/recipes](http://www.iecmagazine.com/recipes).

**Power down electronics.** While this should be done on every date, this occasion can be extra special by turning off your phone and television. That way you can spend uninterrupted time with your Valentine and save energy at the same time.

**Power up coziness.** What better way to end the evening by turning down the thermostat and grabbing a blanket

to cuddle up together? Lowering the thermostat can save you money on your energy bill during cooler months.

**However you choose to celebrate Valentine's Day, Guthrie County REC hopes you #LoveYourEnergy by reducing your electric bill!**

**Guthrie County REC**  
A Touchstone Energy® Cooperative 

## OUR COMMITMENT. YOUR COMMUNITY.

For generations, we've powered the growth of our neighborhoods, businesses, and everything in between.

Today our commitment is stronger than ever to provide affordable energy you can depend on.

# CONNECTED HOMES: THE POWER OF WHAT'S PLUGGED IN

BY JENNAH DENNEY

Our homes are changing, and so is the electric grid. Across the country, more households are becoming "smart" and connected. From thermostats that adjust automatically to electric vehicles (EV) that charge overnight, the devices we plug in are becoming intelligent, flexible and increasingly central to how we use and even produce electricity.

For your electric cooperative, this growing network of connected devices creates new ways for co-ops and their members to work together to keep power reliable and affordable.

## What is a connected home?

A connected home is one where everyday appliances and devices can communicate with each other, you or even with your electric co-op. These could include thermostats that adjust to your patterns and preferences, water heaters that operate when electricity is cheaper, home batteries that store solar-generated power for later use or air-source heat pumps that efficiently heat and cool your home.

Each of these tools can help you use energy more efficiently. And when managed effectively, or when many homes coordinate and balance their energy use together, they can also help your co-op keep power flowing reliably and affordably for the entire community.

## The power you don't see

You might have heard the phrase "behind the meter." This simply refers to energy equipment that operates on your side of the electric meter that you own or control. This could include solar panels, battery storage systems or connected devices like EV chargers or smart thermostats.

Individually, they may seem small, but together they can make a big difference. If hundreds of water

Behind the meter refers to equipment that operates on your side of the electric meter that you own or control. Photo Credit: LG

Connected devices, such as smart thermostats, can help you use energy more efficiently. Photo Credit: LG

heaters slightly delay heating during a peak time of day (when electricity use is high), the co-op can avoid purchasing power at a higher cost, which essentially keeps rates lower for members. If home batteries store solar-generated energy during the day and release it back to the grid at night, it helps balance the overall supply and demand of electricity.

## How connected devices

### help the grid

Each day, our electric grid must maintain a perfect balance to match the amount of electricity generated with the amount of electricity we are using – all in real time. Because electricity can't easily be stored at scale, this balancing act is constant and complex.

Connected devices give electric co-ops powerful new tools to help manage this complexity. Traditionally, electricity use was simple: flip a switch and power flows instantly. But today, many devices can shift when and how they use energy, also known as load

flexibility. Load flexibility allows you and your co-op to better align energy use during times when electricity is more affordable, without sacrificing comfort or convenience.

## The cooperative advantage

Electric co-ops are led by the members they serve. That means co-ops can design connected home programs that work for your community, not Wall Street. Members who participate can often earn bill credits or incentives, and every member benefits from lower peak costs and improved reliability.

Together, we can build a grid that's smarter, more flexible and ready for the future that's powered by what's plugged in. Contact your local electric co-op or visit their website to learn more about programs for connected devices and additional ways you can save energy (and money!).

# SHOULD I UPGRADE MY APPLIANCE?

BY MIRANDA BOUTELLE

Buying a new appliance can feel daunting. Before you hand over your hard-earned money, choose an appliance that will help you save money over time.

When shopping, keep in mind that not all new appliances are high efficiency and not all old appliances are inefficient. The less efficient your current appliance is, the more you will save with an upgrade. The yellow EnergyGuide label on new appliances shows the yearly energy cost, kilowatt-hour electricity use and ENERGY STAR® logo, if certified.

## Refrigerators: When an upgrade pays off

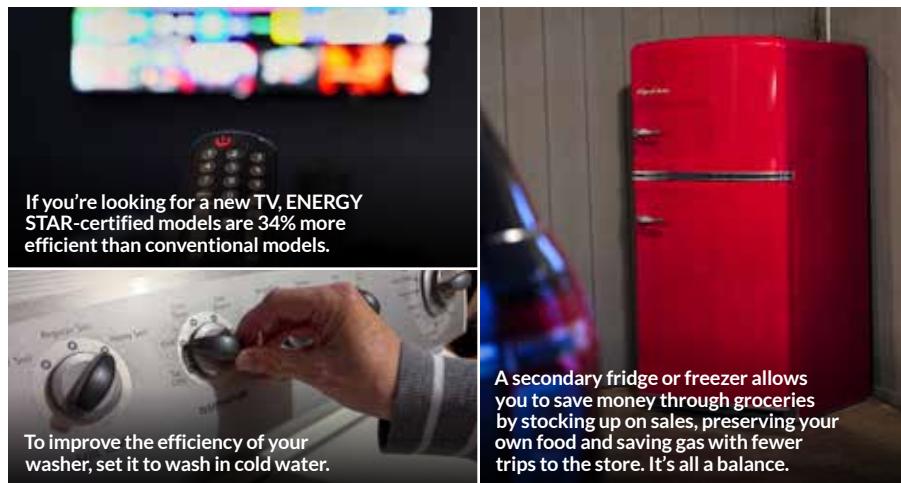

Refrigerators have seen major efficiency improvements over the years. New refrigerators use up to 73% less energy than 1970s models and about one-third less than 20-year-old models.

On a visit to my mom's house, she proudly showed off her 1980s refrigerator she bought when her 1970s harvest gold model died. If her 80s fridge uses 2,000 kilowatt-hours (kWh) per year, at 14 cents per kWh, it costs \$280 per year to operate. New ENERGY STAR-certified refrigerator prices start at \$500 with yearly energy costs ranging from \$38 to \$122. If mom buys a new ENERGY STAR-certified refrigerator for \$1,000 with \$100 yearly energy cost – saving her \$180 per year – it will pay for itself in about 5½ years.

If you intend to keep your existing appliance, be sure to weigh the additional energy costs. Maximize efficiency and keep your food safe by setting your refrigerator to 37 degrees F and your freezer at 0 degrees F.

## Laundry appliances: Efficiency gains aren't always equal

New ENERGY STAR-certified clothes washers and dryers are also more efficient than older models. Use the ENERGY STAR Product

If you're looking for a new TV, ENERGY STAR-certified models are 34% more efficient than conventional models.

To improve the efficiency of your washer, set it to wash in cold water.

A secondary fridge or freezer allows you to save money through groceries by stocking up on sales, preserving your own food and saving gas with fewer trips to the store. It's all a balance.

Finder at [www.energystar.gov](http://www.energystar.gov) to compare products. Integrated Modified Energy Factor measures the washer's energy efficiency. A higher number is better. Integrated Water Factor measures water efficiency. A lower number is better.

I recently bought a new washing machine when my old front-load machine died. I was considering a top-load machine. When I compared ENERGY STAR-certified top loaders to front loaders, I changed my mind. ENERGY STAR-certified front loaders use about 50% less energy and water than top-load agitator washers and about 25% less energy and water than top-load impeller washers that don't have an agitator.

My new washer cost \$698. According to the appliance's EnergyGuide, based on six loads of laundry a week and an electricity cost of 14 cents per kWh, the yearly energy cost is \$15. Similar non-ENERGY STAR-certified models were \$48 per year. Mine didn't cost much more than non-ENERGY STAR models and will help me save over time.

Then I had to make the decision about buying the matching dryer. My dryer was functional but had features I didn't like. At 14 cents per kWh and running roughly six loads a week for an hour each, my old dryer used \$131.04 per year.

The new matching ENERGY STAR-certified dryer cost \$698 and estimates annual energy use at 607 kWh, which is \$84.98 per year at 14 cents per kWh. With an estimated savings of \$46 per year, the dryer would take 15 years for the savings to cover the price. That's a long time and not worth the cost.

To improve your washer and dryer efficiency, wash in cold water, don't over dry clothes and clean your lint trap between every load.

## Televisions: Settings may make a difference

Just like the light bulbs in your home, LED televisions offer increased efficiency. ENERGY STAR-certified televisions are 34% more efficient than conventional models. If you have a working LED television, swapping to an ENERGY STAR model is more efficient but may not make up for the cost of a new TV. Instead, check the efficiency settings on your TV or buy a smart power strip that turns off other connected devices when not in use.

Whatever appliance you are upgrading or replacing, make an informed decision by comparing the cost of operation and shopping ENERGY STAR models to help lower your electric bill.

# LOVING THE LAND

BY DARCY DOUGHERTY MAULSBY

February is the month of love, with Valentine's Day and all the flowers, candy and cards that come with it. I wasn't thinking about valentines, though, last December during the Iowa Association of Electric Cooperatives' (IAEC) Annual Meeting in West Des Moines.

Instead, I started thinking about a love of the land in this unlikely setting, thanks to Red Steagall. Late that Thursday afternoon, Steagall, 87, and The Boys in the Bunkhouse sang songs of the West, celebrating the American spirit. You could tell that Steagall's connections to rural America have remained as strong as his boyhood memories of Texas Panhandle cowboys.

An award-winning songwriter, recording artist, radio host, TV personality and official cowboy poet of Texas, Steagall also has ties to northwest Iowa. As he shared stories that inspired his poems like "The Fence That Me and Shorty Built," Steagall recalled the five summers he spent working on his uncle's farm near Havelock in Pocahontas County. From Texas to Iowa, Steagall's sentiments reflect a love of the land:

"You don't own the land;  
the land owns you."

"We must care for the land  
while we're here and pass it  
on to future generations."

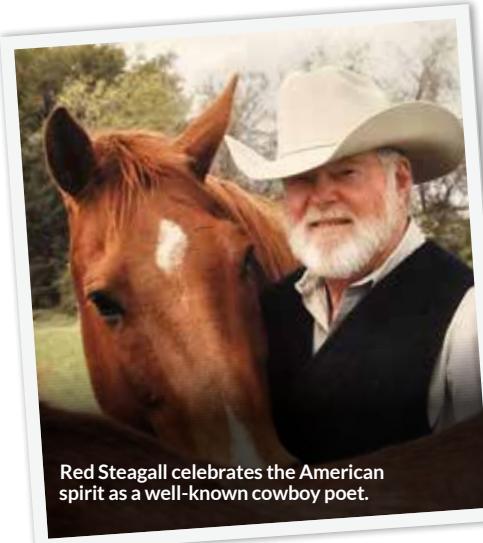

"I sincerely believe in the ownership  
of land in the progress of a  
free, independent society."

Who talks like this anymore?

It's rare to hear unabashed,  
heartfelt sentiments about land  
ownership and the essence of  
American liberty. I was hooked.

## America's story: a history of the land

This brought back memories of growing up on my family's farm northwest of Lake City, where my dad

told me that all original wealth comes from the land. I also recall reading "Gone with the Wind" and thinking about my Irish ancestors who came to Calhoun County in 1889 to farm.

"To anyone with a drop of Irish blood in them – why, the land they live on is like their mother," Gerald O'Hara emphasized to his daughter Scarlett during one poignant scene. "It will come to you, this love of the land. There's no gettin' away from it if you're Irish."

Previous generations intimately understood the inherent value of land. Native Americans' views of land centered on deep spiritual connections, stewardship and communal use – all essential to their identity, culture and survival.

Pioneer settlers often risked everything to acquire land. Western settlement exploded after Congress passed the Homestead Act in 1862. This offered up to 160 acres of public land for a nominal fee to anyone who was willing to claim, settle and farm the land for at least five years.

More than 50% of homesteaders successfully "proved up" and achieved their dream of land ownership. The Homestead Act gave away 10% of U.S. land (270 million acres).

By 2007, there were an estimated 93 million homesteader descendants alive, according to the National Park Service.

## We are born to this land

Despite this heritage, it seems like land isn't top of mind for most people anymore, probably because we've become such an urbanized society. Even in a farm state like Iowa, 63.2% of us live in urban areas. (A community must have a population of at least 5,000 to qualify as an urban area, according to the U.S. Census Bureau.)

Still, there's something about land that touches something deep inside us. Throughout American history, there have been various "back to the land" movements. Then there's the current homesteading movement and the freedom to pursue a simpler, more sustainable life.

"My country 'tis of thee, sweet land of liberty." Or, in the words of the iconic Steagall: "We are born to this land. We call her America. We love her. We are the luckiest people on this earth."

Darcy Dougherty Maulsby lives near her family's Century Farm northwest of Lake City. Visit her at [www.darcymaulsby.com](http://www.darcymaulsby.com).
